Same Products, Different Sellers. Why Should Customers Choose You?

A practical self-reflection to uncover what your customers truly value—and how to build a business they trust and recommend.

Why Should Customers Choose You?

The Instaprenyua Business Self-Audit Toolkit

Three questions. Real evidence. One improvement.

Discover Where Your Business Stands

Begin here during the masterclass; complete later with records and relevant customers. Record a fact or exact quote with its date, source and context; include counts where relevant. Anonymise customer details.

Enquiries and interviews signal interest; they do not prove purchases. 'Verified' supports a specific observed claim in its recorded circumstances, not universal proof.

01 Customer Intelligence

Do I really understand who buys from me, what they value and whether genuine demand exists?

Who actually purchases? • What do they buy, for which needs? • What supports demand before I invest?

Evidence: Completed orders, repeat/returned purchases, prices paid, relevant interviews, enquiries and credible purchase commitments.

What I currently believe _____

What actual evidence shows _____

What I still need to verify _____

Choose one: ☐ Verified through actual evidence ☐ Partially supported ☐ Not yet verified

02 Exceptional Customer Value

What makes my product quality, expertise and customer experience genuinely worth choosing?

Why does my offer suit these needs? • How do I check promised quality? • Which advice or service do customers value?

Evidence: Product comparisons, documented quality checks, customer questions, complaints and product-performance feedback.

What I currently believe _____

What actual evidence shows _____

What I still need to verify _____

Choose one: ☐ Verified through actual evidence ☐ Partially supported ☐ Not yet verified

03 Continuous Customer Learning

What have I learned from actual customers that has changed or improved my business?

What happens after purchase? • Which frustrations or unmet needs recur? • What changed because of feedback?

Evidence: Customer-use accounts, returns, complaints, changes made and follow-up results; separate suspected causes from confirmed findings.

What I currently believe _____

What actual evidence shows _____

What I still need to verify _____

Choose one: ☐ Verified through actual evidence ☐ Partially supported ☐ Not yet verified

No buyers yet? Ask relevant potential buyers about recent actual purchases; run a small, honest demand test with clear price, availability, delivery and refund terms. Mark untested claims 'Not yet verified'.

Choose One Meaningful Improvement

Use the most important gap from page 1. Investigate it, then test one manageable change before committing more capital. There is no universally sufficient sample size or test period.

My Most Important Finding

What specific gap or opportunity did I discover? Which observation supports it?

Evidence I Need

What remains uncertain? Which records or relevant customer experiences could clarify it?

One Improvement I Will Test

What one change will I make, for whom and on what terms? Who will do it, by when? Keep the commitment manageable.

How I Will Measure It

Record a baseline and a comparable result, each with dates and a denominator where relevant (e.g., completed orders / comparable offers). Include costs, returns and changed conditions. Set a rule for continuing, revising or stopping; small or changing samples limit conclusions.

My Review Date

Choose a date suited to the buying or use cycle. At review, record your decision and the evidence behind it.

Illustrative example — Asha (fictional)

Finding: recent orders suggest professional women buying office wear may be a useful segment. Verify: repeat purchases, returns, prices paid, sourcing/delivery costs and seasonality. Test: a small, specified office-wear range on clear terms. Measure: completed orders/comparable offers and feedback against a comparable baseline; include costs and returns. Review: choose a date suited to the buying cycle and assess whether evidence supports expansion. No result is assumed.

Seek permission for follow-up; respect refusals. Keep customer details private. Act promptly on a serious product-safety concern rather than waiting for repeated reports.
